## STG walk behind trowels get the job done

Our new STG range of walk behind power trowels are the ideal tool when concrete slabs are being poured – they are easy to use, move and maintain whilst not compromising safety.

Get it done!

### Safety first

The new QuickStop mechanism stops the blade rotating immediately, without causing the handle to spin. The STG range has low hand/arm vibration levels.

### Easy to control comfortably

The robust, palm trigger handle gives the operator complete control. Plus the height of the de-vibrated, handle is easy to adjust to suit the operator.

### Easy to maintain

The STG's integrated front maintenance stand, bolt-on blades and secured belt cover screws all help to speed up and simplify maintenance. Parts exposed to wet concrete are designed for easy cleaning, and all models are powered by a Honda engine.

### Easy to transport

The STG range comes with a single lifting eye and foldable handle as standard. Transport wheels are also available.

### Ideal for compact areas

With rubber edging to protect walls and obstacles, the compact STG244 is perfect for working in confined spaces.
